

ANTHONY FASANO, P.E, AEC PM, F. ASCE

President and Founder of the
Engineering Management Institute

Fasano has provided speaking and training services for many organizations including:

ABOUT ANTHONY:

Like many engineers, I had a goal of becoming a **high-level executive** in my engineering organization. When observing the leaders in my company, it was obvious that they possessed skills in addition to their technical skills, namely great people management or 'soft' skills. So, I set out to develop my 'soft skills,' a move that not only rapidly advanced my career, but led to me becoming an **internal coach and trainer** for my company, and ultimately inspired me to leave my engineering career behind to spend more time helping engineers become more effective managers and leaders.

When I first decided to try to help engineers develop their management skills on a broad scale, people told me I wouldn't succeed. They said engineers aren't interested in developing these skills and they certainly wouldn't listen to podcasts or watch videos on the subject. Well, **three million downloads later and a Forbes citation has proven them wrong.**

Engineers with sound people leadership and project management skills can accomplish anything, for themselves and their firms, and our mission is to make sure that sustainable engineering management learning opportunities are available to every organization and engineer who needs them.

Let us help you succeed.

Topics Anthony can discuss

- Leadership and management skills for engineers
- Project management principles and best practices
- Building a successful engineering career
- Overcoming challenges faced by engineers in management roles

Questions to ask Anthony

- 1 How can engineers more easily transition into management and leadership roles?
- 2 What are the most common misconceptions you find among engineers regarding management skills?
- 3 What are the key soft skills that you believe every engineer should develop?
- 4 What are the biggest challenges facing engineering project managers today?
